

MEDIA RELEASE

30 April 2009

Realtime video surveillance from anywhere, at anytime

Enabling business owners and security operators to remotely monitor activity on premises via the internet, the ADT IP Connect Video Portal is the latest offering from the world's largest electronic security company, ADT Security.

Using the ADT IP Connect Video Portal, live and event-based recorded video images can be viewed via a password protected website*, accessible from any internet connected computer or supported mobile phone.

Capable of streaming content from up to eight cameras, the web portal then allows two live cameras to be viewed simultaneously in addition to any review footage associated with recent alarms to help verify what triggered the activation.

Through the ADT IP Connect Video Portal, in the event of alarm activation, ADT Security has the ability to remotely perform a Visual Verification service. This is where trained operators from ADT's Security Response Centre view images from onsite cameras to increase the likelihood of identifying its trigger. This becomes especially important in potentially life threatening situations where a traditional guard may take longer to respond.

The ADT IP Connect Video Portal also enables ADT's trained operators to perform Virtual Guard Patrols of the premises on a customised schedule, at a fraction of the cost associated with traditional guard services.

According to Stevan Ristic, National Product Manager, ADT Security: "The widespread availability of broadband connections plus the increase in available bandwidth provides an ideal platform for the development of next generation remote security monitoring services - this web portal represents one such innovation."

"By enabling users to see in real-time what's happening at their premises from anywhere and at anytime, the ADT IP Connect Video Portal provides business owners with the confidence that their assets are secure, even when they are not there."

The ADT IP Connect Video Portal is hosted on ADT Security's IP Connect Gateway, a reliable high security platform that complies with Australian Standard AS2201.5.

The ADT IP Connect Video Portal is hosted on ADT Security's IP Connect system - a high security platform that offers a more reliable, flexible and cost effective solution than conventional monitoring technology.
