Quick Setup & Installation

Thank you for purchasing the SUPA8 Security Alarm System, the following is intended to assist you in the installation of the system. Please read these guidelines before installation.

**Note:** In some States of Australia special licensing may be required in order to install Security Alarms and Associated Equipment. Please check with your local State Authority for details before commencing installation work.

**IMPORTANT:**
This section is a brief outline of installation and programming. For additional information refer to the SUPA8 Installer Manual.

**Factory Defaults**

THE SUPA8 ALARM SYSTEM COMES FROM THE FACTORY PROGRAMMED AND READY TO GO. BEFORE MAKING ANY CHANGES, CHECK WHAT IS ALREADY PROGRAMMED, AS THEY WILL MOST PROBABLY SUIT YOUR NEEDS.

**MASTER USER CODE**: 1 2 3 4  
**INSTALLER CODE**: 2 5 8 0  
**ENTRY TIME**: 30 seconds  
**EXIT TIME**: 60 seconds  
**SIREN TIME**: 5 minutes  
**ZONE TYPE**

**NOTE:** When Armed in Home Mode Zones 5 and 6 has been programmed to be isolated.
Installation of the Security System

Step 1:
Plan out location of all components supplied in your kit as follows:

Suggested Locations for Equipment Mounting

(a) The 8 Zone Master Panel Box should always be located out of sight (i.e. cupboard, wardrobe or in an area it would not be easily seen).

(b) The 8 Zone Keypad should be situated near the main entry/exit point (usually inside the main front door).

(c) The External Siren (enclosed in siren cover along with Tamper Button) should be mounted in a prominent position in full view. This would normally be mounted under the eaves at the front of the house in a corner position. The strobe light is mounted onto the siren cover.

(d) The Flush Mount Reed Switches are most suitable to be mounted on the front and back doors.

(e) The Passive Infra Red Detectors (PIR’S) should be situated to cover high access areas (eg: Hallways and areas of high importance or value).

(f) The Emergency Button should be located in a position for quick easy access in an emergency or panic situation (suitable position could be a bedside location).

(g) The Pinkerton Security Alarm Warning Stickers should be placed on the front face of the Siren cover and on an outside window in clear view.

Note: PIR’s are susceptible to environmental conditions such as wind and air movement. Windows must be closed when system is armed to avoid possible false alarms.

Step 2:

(a) Install all cabling to component positions.

(b) Austel approved cables must be installed if the system is to be monitored. Use two pair (4 core) 14/0.20 and Figure 8 (2 core) 14/0.20.

REMEMBER TO MARK YOUR CABLES.
**Step 3:**

(a) Mount devices in the most suitable locations (as suggested in Step 1).
(b) Wire cabling directly into devices.
(c) At this point install the 4.7K End of the Line (EOL) Resistor.  
(Refer to Page 7).

The feature of this resistor is that when installed at the furthest point in the Zone, tampering or interference with the wiring is not possible without setting off the alarm.

*Note:* All joints connecting cables to EOL Resistors must be soldered and taped.

**Step 4:**

(a) Install Master Control Panel and connect all cabling to panel.
(b) A 240V GPO is required adjacent to the Master Control Panel position for the Plug Pack.

**Step 5:**

Seal any unused or spare Zones with a 4.7K (EOL) end of line resistor.

**Step 6:**

Connect Battery, now Switch on Plug Pack supply.

*Note:* Once the alarm system is powered up, control of the system is handed over, and managed by the 8 Zone Keypad. All programming for the system is done via the Keypad.

**Step 7:**

Upon power up the Zone 3 LED will be on, and the ON-LINE LED will also be on indicating a system self test.

After the alarm panel has initiated this tests the panel will go into alarm if Zones 7 & 8 (24 hour Zones) are not sealed.
To DISARM the panel:

(a) On Keypad
Enter: \[1\ 2\ 3\ 4\] (all Zone lights will flash)

(b) Followed by: \[0\] (the off key)

**Step 8: Walk Test**

To check operation of all Zones a Walk Test is recommended.

(a) On Keypad
Enter: \[1\ 2\ 3\ 4\] (all Zone lights will flash)

(b) Followed by: \[5\] (to initiate a walk test)

The walk test function is now activated.

The Zone LED will light as each Zone is triggered and the siren will squawk momentarily. The Zone LEDs will remain on to show which Zone has been violated. (Requires only one person testing).

To deactivate a walk test press the \[\] key.

**THE SYSTEM IS NOW OPERATIONAL**

To arm and disarm the system enter Master User Code \[1\ 2\ 3\ 4\] (factory default) followed by

To arm the system enter: \[9\] (ON)
To disarm the system enter: \[0\] (OFF)

_Note:_ The system can also be quick armed by pressing \[a\ 9\]
To disarm enter User Code then \[0\]
To change Master User Code or User Codes, please refer to Page 22

This completes the instruction for a Local Panel
Commissioning the Dialler Panel

Austel Requirements:

Austel requirement’s state that all Dialler Panels connected to the Telephone Network must have the Telephone connection and termination work performed and completed by a current Austel Licence Holder.

To Assign for Local Dialling (to a nominated telephone number) for Self Monitoring Purposes.

**Step 1:**

**On Keypad**

Enter programming mode: 25807

You are now in Programming Mode (ON-LINE light will flash).

**Step 2:**

**On Keypad**

To set up Personal Reporting format:

Enter: 250 (address number)

Followed by: 2578 (cancels the programming mode)

**Step 3:**

**On Keypad**

Re-enter programming mode:

Enter: 25807

**Step 4:**

**On Keypad**

Entering of required telephone number/s.

1st Telephone Enter: 128 0301234567 8 6 #
2nd Telephone Enter: 144 0411234567 8 6 #

**Note:**

(a) The above numbers are examples only. You must enter the correct numbers to dial according to the Home owner’s requirements. A maximum of two telephone numbers can be programmed.

(b) The phone numbers can consist of a mix of mobile phone numbers and local phone numbers. Only one phone number can be programmed if required.

(c) # is used to finish the phone number.

(d) ~ completes address (allows next address).

**Step 5:**

**On Keypad**

Exit programming: Enter: ~
System is now operational as a Self Monitored Dialler.

Note: In the event of an alarm, the dialler will emit via the telephone system, a computer generated siren tone. If you are installing a Dialler Panel and do not wish to connect to a telephone line, you MUST default the panel to a local format. (See page 7 of Installer Manual)

To Assign for Pinkerton Security Central Monitoring Station Dialling.

There are two formats that can be selected for central station monitoring; domestic monitoring and business monitoring. The difference between domestic and business monitoring is that business monitoring will send opening and closing reports. Before commencing programming please contact Pinkerton Monitoring Pty Ltd on (03) 9888 9889 for allocation of Dialler Telephone Numbers and Client Identification Number.

**Step 1:** **On Keypad**
To enter programming mode.

Enter: 25807

You are now in Programming Mode (ON-LINE light will flash).

Enter: 250 3579 (for domestic monitoring)
or

250 4578 (for business monitoring)

**Step 2:** **On Keypad**
Re-enter programming mode:

Enter: 25807

**Step 3:** **On Keypad**
To program Central Monitoring Station Telephone Number:

Enter: 128 0391234567 0 3 0 1 2 3 4 5 6 7 8 6 -
Enter: 144 0391234567 0 3 0 1 2 3 4 5 6 7 8 6 -

Note:

(a) The above number 03 91234567 is an example only.
(b) If you are only supplied with one central station number please enter that number into both telephone addresses.
(c) #6 is used to finish the phone number.
(d) - completes address (allows next address).
**Step 4: On Keypad**

To assign Client Identification Account Number (example No:1111).

Enter: 160 1111
Enter: 164 1111

**Note:** The Account Number must be programmed into both addresses.

The above Account Number is allocated by your Central Monitoring Station.

Enter: (to exit programming mode).

This system is now operational as a Central Monitoring Station Dialler.

**Zone Input Connections**

General Examples Only. Refer to installation guidelines supplied with device.
SUPA8 Quick Setup

Panel Diagram

SUPA8 Main Board

[Diagram showing the connections between components like Battery leads, Red, Black, 12VAC, Plug Pack, Panel Diagram, SUPA8 Main Board, Keypad/s, 12VDC for detectors & accessories, 12V SIREN, 12V STROBE, etc.]

[Notes and specifications related to the diagram might be included here, but are not explicitly mentioned in the given text.]
The SUPA8 Keypad

The SUPA8 Keypad controls the operation of the SUPA8 alarm panel. It uses a series of command entry keys to input codes that can arm, disarm and program the system. The soft-touch rubber keypad is concealed behind a hinged lid and a series of System and Zone lights run down the right-hand side of the fascia.
SUPA8 Indicator Lights

Listed below are the use of the indicator lights when in normal operation.

<table>
<thead>
<tr>
<th>Keypad Light</th>
<th>Light ON</th>
<th>Light OFF</th>
<th>Light Flashing</th>
</tr>
</thead>
<tbody>
<tr>
<td>On-Line</td>
<td>Dialler on line</td>
<td>Dialler not on line</td>
<td>Dialler had problems</td>
</tr>
<tr>
<td>Low Batt</td>
<td>Battery Charge Voltage Low</td>
<td>Battery OK</td>
<td>Had Low Batt alarm</td>
</tr>
<tr>
<td>AC Fail</td>
<td>Power not connected</td>
<td>Power OK</td>
<td>Had AC fail alarm</td>
</tr>
<tr>
<td>On</td>
<td>SUPA8 is ON (Away mode)</td>
<td>SUPA8 is OFF</td>
<td>SUPA8 is ON (Home mode)</td>
</tr>
<tr>
<td>Zone 1 - 8</td>
<td>Unsealed, Manual or Auto isolated</td>
<td>Zone is sealed</td>
<td>Had alarm</td>
</tr>
</tbody>
</table>

Note that the status of the Zones will always be displayed unless disabled by the installer. The Low Batt and AC Fail lights will show the current state of these inputs, however the alarm (or restore) condition may have to be present for a period before a report is initiated.

If the dialler fails to communicate, the On-Line light will remain flashing until the next time the system is turned OFF.

**All Zone lights on plus a continuous beeper**

Means the keypad is locked out for 60 seconds caused by 4 consecutive incorrect code entries.

**All Zone lights flashing**

Indicates a legal code has been entered (or the # key pressed) and the SUPA8 expects another key to be pressed to select the desired function within 10 seconds.

To cancel simply wait 10 seconds or press the * key.

Keypad Beeper Operation

The keypad beeper will sound under the following circumstances:
### Keypad Lockout

If an incorrect code is entered 4 times then the keypad will be locked out for 60 seconds. During this time the Zone lights will be on and the beeper will sound continuously.

### Keypad Entry Errors

When an error is made in entering digits, the keypad will emit a long beep and resume idle mode. Just prior to the beep the Zone lights will display the type of error that was detected:

<table>
<thead>
<tr>
<th>Light ON</th>
<th>Error type</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>÷ key pressed.</td>
</tr>
<tr>
<td>2</td>
<td>No matching code was found.</td>
</tr>
<tr>
<td>3</td>
<td>Keypad timeout has occurred.</td>
</tr>
<tr>
<td>4</td>
<td>Illegal key in current mode.</td>
</tr>
<tr>
<td>5</td>
<td>Illegal mode (either SUPA8 is ON or not in exit delay).</td>
</tr>
<tr>
<td>6</td>
<td>Action prevented by a programming option.</td>
</tr>
<tr>
<td>7</td>
<td>Address/Action is illegal for this code.</td>
</tr>
</tbody>
</table>
SUPA8 Operation

Keypad Key Functions

After a code is entered or the # key is pressed, you have 10 seconds to select the operation you wish to perform. During this time all 8 Zone lights will flash to indicate that a key should be pressed. If no key is pressed within 10 seconds, the keypad will revert to idle mode. Enter your code to start again.

The * key is always used as the "clear key" to abort the current operation.

Operation of all keys

PANIC
Key 1

Enter a User Code followed by 1 or enter # 1 to trigger the Panic function. The Panic function can trigger the siren or strobe light or dialler as programmed by your installer.

DURESS
Key 2

Enter a User Code followed by 2 or enter # 2 to trigger the Duress function. The Duress function can trigger the siren or strobe light or dialler as programmed by your installer.

TEST
Key 3

Enter a User Code followed by 3 or enter # 3 to trigger the Test function. The Test function is used to test the dialler by sending a test transmission to the programmed telephone numbers. This function is only available if your system is programmed to report alarms to a monitoring station.
REVIEW

Key 4

Enter a user code followed by 4 or simply enter # 4 to enter review mode. The ON-LINE, LOW BATT, AC FAIL & ON lights will all be on to indicate you are in review mode. Review mode displays a history of past alarms and events stored in the SUPA8’s memory. This alarm memory is permanently stored and can be cleared by pressing the 0 key while in review mode.

(Please note that your Entry Delay Zone/s will always be stored in memory, even if they have not alarmed.)

While in review mode, various events will be displayed by pressing the following keys:

Key 1 Displays past Zone alarms since the last reset.
Key 2 Displays past alarms other than Zones.
Key 3 Display previous events (miscellaneous).
Key 0 Clear review memories.
Key 9 Displays the SUPA8’s software version. (in binary).
Key * Exit review mode.

When first entered, review shows past Zone alarms. The following tables show how to interpret the various displays:

REVIEW 1
Previous Zone Alarms

While in REVIEW mode, pressing Key 1 displays:

<table>
<thead>
<tr>
<th>Zone</th>
<th>Light</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 8</td>
<td>1 - 8</td>
<td>Previous alarm on Zones 1 - 8 since the SUPA8’s last reset.</td>
</tr>
</tbody>
</table>

*Note: The first Zone that was triggered will be flashing.*
**REVIEW 2**

**Previous Non-Zone Alarms**

While in REVIEW mode, pressing Key 2 displays:

<table>
<thead>
<tr>
<th>Zone Light</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Duress input triggered.</td>
</tr>
<tr>
<td>2</td>
<td>Panic input triggered.</td>
</tr>
<tr>
<td>3</td>
<td>Test input triggered.</td>
</tr>
<tr>
<td>4</td>
<td>Low Battery input triggered.</td>
</tr>
<tr>
<td>5</td>
<td>AC Fail input triggered.</td>
</tr>
<tr>
<td>6</td>
<td>On input triggered.</td>
</tr>
<tr>
<td>7</td>
<td>Fail-to-communicate input triggered.</td>
</tr>
<tr>
<td>8</td>
<td>Spare input triggered.</td>
</tr>
</tbody>
</table>

**REVIEW 3**

**Previous Events (Miscellaneous)**

While in REVIEW mode, pressing Key 3 displays:

<table>
<thead>
<tr>
<th>Zone Light</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Siren has been turned on.</td>
</tr>
<tr>
<td>2</td>
<td>Strobe has been turned on.</td>
</tr>
<tr>
<td>3</td>
<td>Dialler has been triggered.</td>
</tr>
<tr>
<td>4</td>
<td>Dialler failed (reached max. attempts).</td>
</tr>
<tr>
<td>5</td>
<td>(Not used)</td>
</tr>
<tr>
<td>6</td>
<td>Maximum code attempts activated.</td>
</tr>
<tr>
<td>7</td>
<td>Low battery has turned off siren (and strobe).</td>
</tr>
<tr>
<td>8</td>
<td>Answered phone.</td>
</tr>
</tbody>
</table>
WALK TEST

Key 5
Selecting this operation whilst the SUPA8 is OFF will initiate walk-test mode. Walk-test can only be performed by holders of user codes 1 to 7. Walk-test mode allows all Zones, the siren and the strobe to be tested. Operation is as follows:

When walk-test mode is first entered, all 8 Zone lights will be off. The AC Fail light will show whether AC is present or not and the Low Batt light will show whether the battery charging voltage is adequate.

As Zones are triggered the siren will squawk and the relevant Zone light will turn on and remain turned on. This allows a "one man" walk-test by walking through all Zones.

Pressing the 0 key turns off all Zone lights and allows the test to be repeated, if required.

SIREN AND STROBE TEST.
While in test mode:

Pressing the 1 key will turn on the siren.
Pressing the 2 key will turn on the strobe. *This enables you to check the individual operation of the siren and strobe.*
Pressing the 3 key will turn off the siren and strobe.
Press the * key to exit walk-test.
ISOLATE

Key 6

This operation allows Zones 1 - 8 to be manually isolated or re-enabled at any time and is only available to holders of user codes 0 to 7. The ON-LINE, LOW BATT, AC FAIL and ON lights will illuminate and the Zone lights will show the current manual isolate status of the Zones. A Zone light being ON, means that Zone is manually isolated.

As keys 1 to 8 are pressed, the relevant Zone light will toggle on or off. When the light is on the Zone is isolated.

The * key is used to exit out of isolate mode (isolate mode will also end if there are no keys pressed for 10 seconds).

Note that isolated Zones only remain isolated until the next time the SUPA8 is turned OFF, even if the SUPA8 is already OFF. AC fail, Low battery, Panic, Test and Duress inputs cannot be isolated. See page 13 for examples.

PROGRAM

Key 7

Enter installer or master code followed by 7 to enter programming mode. Only available to the master code and the installer code.

ON (HOME MODE)

Key 8

Enter any user code followed by 8 or enter # 8 to turn the SUPA8 ON in Home Mode. ON light will flash to indicate SUPA8 is armed in home mode. Only Zones which are programmed as Home Zones will be active.
ON (AWAY MODE)
Key 9

Enter any user code followed by 9 or enter # 9 to turn the SUPA8 ON in Away Mode. ON light will turn on to indicate SUPA8 is armed in Away Mode. Only Zones which are programmed as Away Zones will be active. All user codes are allowed to arm the SUPA8.

OFF (DISARM)
Key 0

Enter any code followed by 0 to turn the SUPA8 OFF. Turning the SUPA8 OFF will also turn the sirens and strobe off and re-enable manually isolated Zones even if the SUPA8 is already OFF.

How to turn the system ON.
AWAY mode (using your User Code)
In the AWAY mode, all Zones programmed as AWAY Zones will be armed. (Typically this means all Zones.)

The ON light should be off indicating the system is OFF.

Make sure that all protected doors and windows are shut securely. Check also that all Zone lights on the Keypad are off, except for the Zones you use to exit the premises. (Check that no pets are left to roam inside the protected areas - curious cats and dogs are a major cause of false alarms).

1. Enter * ...................... To clear the keypad

2. Enter ............................ Your User Code
   (All Zone lights will flash - waiting for a command)

3. Enter ............................ Arms the SUPA8 in Away mode

4. Check that the ON light turns on.
   (The exit beeper will sound continuously during exit delay. If the exit beeper has been turned off by the installer, three beeps will be heard at the end of exit delay.)
You now have a limited time to leave the premises (which will have been preset by your installer) before an alarm is generated. If you need to re-enter the premises, turn the system OFF, then back ON again as you leave.

NOTE: If you make a mistake when you attempt to enter your User code, press the * key and try again.

**AWAY mode (using Quick Away)**

Your installer may have programmed the SUPA8 to allow abbreviated arming. If so, turn the system ON as follows.

1. Enter * .................... To clear the keypad

2. Enter # .................... (All Zone lights will flash - waiting for a command)

3. Enter 9 .................... Arms the SUPA8 Away mode

4. Check that the ON light turns on.
   (The exit beeper will sound continuously during exit delay. If the exit beeper has been turned off by the installer, three beeps will be heard at the end of exit delay.)
AWAY mode (using Super Codes)

WHAT ARE SUPER CODES?
The Super Codes option allows the Master Code holder to issue user codes with limited functions to some users of the SUPA8.

SUPER CODE OPERATION
If your installer has enabled the Super Codes option, User Codes will operate as follows:

Master User Code and User Codes 2 to 7 operate normally (as per page 9).

- Enter USER CODE then 9 to turn SUPA8 ON.
- Enter USER CODE then 0 to turn SUPA8 OFF.

Or Enter USER CODE then [any digit] for access to all allowable functions.

User Codes 8 to 15 operate as below and can only turn the SUPA8 ON and OFF.

- Enter USER CODE to turn SUPA8 ON.
- Enter USER CODE to turn SUPA8 OFF.

PURPOSE OF SUPER CODES
The Super Codes option was introduced for two reasons. Some users prefer the option of simply entering their four digit user code to turn ON or OFF without the requirement to enter the fifth, command digit. If you have multiple users each with their own user code, you may not want to allow all the users to have access to other SUPA8 functions such as Review Memory, Isolation, Walk Test, etc. These users should be allocated a user code from 8 to 15.

Holders of codes 8 to 15 still have access to the keypad Panic facility by pressing #1.
HOME mode (using your User Code)
The ON light should be off indicating the system is OFF.

Your installer may have installed your system so that some areas may be monitored whilst you are still on the premises. For example, the doors and windows may be protected at night leaving the internal detectors isolated to allow movement inside the house.

Make sure that all protected areas are shut securely.

1. Enter * .................... To clear the keypad

2. Enter ........................ Your User Code
   (All Zone lights will flash - waiting for a command)

3. Enter ........................ Arms the SUPA8 in Home mode

4. Check that the ON light starts flashing to indicate arming in Home mode.
   (The exit beeper will sound continuously during exit delay. If the exit beeper has been turned off by the installer, three beeps will be heard at the end of exit delay.)

HOME mode (using Quick Home)
Your installer may have programmed the SUPA8 to allow abbreviated arming. If so, turn the system ON as follows.

1. Enter * .................... To clear the keypad

2. Enter .................... (All Zone lights will flash - waiting for a command)

3. Enter .................... Arms the SUPA8 in Home mode

4. Check that the ON light turns starts flashing to indicate arming in Home mode.
   (The exit beeper will sound continuously during exit delay. If the exit beeper has been turned off by the installer, three beeps will be heard at the end of exit delay.)
How to turn the system OFF

The ON light will be on or flashing.

1. Enter $\text{___} / G95 / G95 / G95 / G95$ .... Your User Code
   (All Zone lights will flash - waiting for a command)

2. Enter $\text{0}$ ....................... Turns OFF the SUPA8

3. Check that the ON light turns off.

Isolating Zones

You are able to isolate (disable) selected Zones and turn the system ON. This is useful in cases where, for example, a pet will be kept in a certain room or if a detector has become faulty and must be isolated from the system.

1. Enter $\text{*}$ ....................... To clear the keypad

2. Enter $\text{___} / G95 / G95 / G95 / G95$ .... Your User Code
   (All Zone lights will flash - waiting for a command)

3. Enter $\text{6}$ ....................... The ON-LINE, LOW BAT, AC FAIL & ON lights will turn on to indicate isolation mode.

4. $\text{___}$ ....................... Enter the Zone number/s you wish to isolate. The corresponding lights will turn on. Pressing the Zone number again will turn off the isolation for that Zone.

5. Enter $\text{*}$ ....................... To exit isolation mode

The system can now be turned ON as normal. Isolated Zones are enabled again the next time you turn the SUPA8 OFF.
Programming User Codes

Use the Master User Code to enter and delete user codes as follows. The Master User Code can re-program other codes as well as turning the SUPA8 ON and OFF.

There are 14 user codes plus the Master User Code. All codes are four digits in length. Do not program two codes identically. If two codes are the same, only the lower numbered code will be active. (For example, if user code 3 and 9 are both programmed as 1234, the SUPA8 will only recognise user code 3).

1. [4][4][4][4] ............ Your Master User Code
   (All Zone lights will flash - waiting for a command)

2. [7].......................... To enter program mode
   (ON-LINE lights flashing indicates program mode)

3. [4][4][4][4] .................. Address for the User Code
   See the table of addresses on page 20.
   (The existing User Code, if any, will be displayed digit by digit. If the User Code you are programming is currently blank, lights 7 & 8 will be on.)

4. [4][4][4][4] .................. Enter a four digit code
   Enter each digit slowly and wait for the keypad to beep after each digit is entered. The ON-LINE light will be flashing if all digits have been entered correctly.
   (If you make a mistake at this stage, press [4] to go back to step 3)

5. [*].......................... To exit program mode
Personal Reporting

Personal reporting allows dialler reports to be sent to a person rather than a central station if an alarm occurs. When an alarm occurs, the SUPA8 will automatically seize the telephone line and dial a pre-programmed phone number. The SUPA8 will then output an alternating high/low siren sound to indicate that an alarm has occurred.

Rather than sending the audible siren tone, the SUPA8 can be programmed to send beeps down the line to identify the Zone causing the alarm. The number of beeps equal to the Zone number that was triggered.

Every 10 seconds the tones will pause, allowing any key to be pushed to acknowledge the call and cause the SUPA8 to announce the current state of the system; 1 beep if OFF, 2 beeps if ON. The # key may now be used to hang-up the SUPA8 immediately or it will hang-up automatically after 15 seconds. Before hanging up, the SUPA8 can be turned ON or OFF, see page 17.

If after one minute no key has been pressed, the SUPA8 will hang up and try again.

During reporting in personal format mode, prior to a key being pushed by the answering party, the report may be aborted by entering any valid user code on the SUPA8 keypad. Note that once the called party has pushed a key, the SUPA8 keypad lights will flash indicating that the called party is now in control.

A special temporary telephone number can be programmed by the Master User Code to replace the primary telephone number. When programmed, this number will replace the primary telephone number until the SUPA8 is next turned OFF from away mode, at which time the first digit of the temporary number is erased (disabling the temporary number) and operation will revert to the primary telephone number.
Programming Telephone Numbers

*Note: To be able to program telephone numbers the SUPA8 must be programmed for personal dialling format.*

Telephone numbers are programmed at specific addresses in the system memory.

Addresses are:
- Telephone Number 1: 128
- Telephone Number 2: 144
- Temporary Telephone: 112

Programming Telephone number 1

1. ...................... Your Master Code
   (All Zone lights will flash - waiting for a command)

2. .......................... To enter program mode
   (ON-LINE lights flashing indicates program mode)

3. .......................... Address for Telephone number 1
   (The existing telephone number, if any, will be displayed digit by digit)

4. .......................... Enter the Telephone number
   (Maximum 15 digits)
   (If you make a mistake at this stage, press * to go back to step 3)

5. .......................... Must be entered after the number

6. .......................... To finish current address

At this stage you can enter the address of another telephone number by repeating steps 3 to 6 or press # to exit program mode.

*Note: The maximum length of any telephone number is 15 digits.*
Operation by Telephone

Your SUPA8 alarm panel may have been set up to allow you to telephone the system to determine if it is ON or OFF. You can also turn the system ON or OFF remotely by telephone. The call can be made from any telephone capable of tone dialling, including DTMF-capable mobile telephones. To operate your system by a telephone call, follow the steps below:

1. Ring the number that your SUPA8 is connected to. In most cases that will be your home telephone number.

2. After 15 rings, or the programmed number of rings, the SUPA8 will answer the phone. If the SUPA8 is OFF only one beep will be heard.

   If the call is cut off before 15 rings (either because the telephone network will not allow 15 rings or an answering machine is connected and keeps intercepting the call), immediately hang up and call the system back. It remembers the number of rings for 45 seconds after a call attempt has been terminated. It will continue to count rings through repeated attempts until either 15 rings have occurred or more than 45 seconds has elapsed without a ring. (If you only want to check the ON/OFF status of the SUPA8, without making any change, simply hang up after you hear the beep or beeps.)

3. If you want to turn the SUPA8 ON, enter your 4 digit user code followed by the 9 key on your telephone keypad. If you make a mistake then press the * key and try again.

4. If you want to turn the SUPA8 OFF, enter your 4 digit user code followed by the 0 key on your telephone keypad. If you make a mistake then press the * key and try again.

5. The # key may now be used to hang-up the SUPA8.

   **NOTE:** If the SUPA8 needs to ring the monitoring station as a result of turning ON or OFF the panel then you should hang-up immediately to allow the call to proceed.
Frequently Asked Questions
General Questions

Q Can an alarm be caused when the system is OFF?
A Yes. Some Zones may have been programmed to be on all the time. These are termed “24 Hour Zones”. If a 24 Hour Zone causes an alarm when the SUPA8 is OFF, just turn the SUPA8 OFF using your user code and the \G key.

Q How can I tell the system is ON, OFF or in HOME mode?
A By looking at the ON light you can tell whether the SUPA8 is ON or OFF. If the ON light is on then the SUPA8 is on in AWAY mode. If the ON light is flashing then the SUPA8 is on in HOME mode. If the light is off then the SUPA8 is OFF (except for any 24 Hour Zones).

Q What happens if the power is turned off?
A If the mains power is turned off your SUPA8 will continue to operate on its own internal battery for many hours and will indicate the fact by turning on the AC Fail light. When the power is again turned on the internal battery will begin recharging. Your SUPA8 may be programmed to report the power failure and also report when the power is reinstated.

Q When does the system use my telephone?
A If your SUPA8 is programmed to report openings and closings, (every time you arm the SUPA8 in AWAY mode and when you disarm it), the SUPA8 will report to the monitoring station. However, it will only report an opening or closing after the appropriate entry or exit delay has expired. The SUPA8 will also use your telephone if you have an alarm which is to be reported, if the mains power fails, or if the back-up battery runs low. While the SUPA8 is using the telephone line the “On-Line” light will be on and the telephone handset that uses that line will be disconnected for the duration of the call.

Q What happens if the SUPA8 answers the telephone before I get to it?
A Your SUPA8 may be programmed to answer the telephone after 15 rings. If it answers the call after 15 rings, and before you can get to the telephone, it will automatically hang-up after 30 seconds if it does not hear any tones.

Q How can I tell if I’ve had an alarm?
A If an alarm has occurred on a Zone, the respective Zone light on the keypad will be flashing until the SUPA8 is turned OFF. Use the REVIEW mode to view past Zone alarms.
If programmed, the strobe light flashes continuously until the SUPA8 is turned OFF.
Q There’s been a false alarm in the Zone that’s been programmed for 24-hour monitoring and I need to reset the SUPA8. What do I do?
A Turn the system OFF using your User code and the $ key. Then, enter your Master User Code and press 2 followed by 555. This will cause the SUPA8 to reset and disable any 24 hour Zones until it is turned ON again.

Questions about Using the Telephone

Q What happens if I get cut off before 15 rings?
A Sometimes the network will cut short the attempted phone call before 15 rings. This is especially true if making the call from a mobile telephone. If this happens immediately hang up and try again. The SUPA8 will “remember” the last number of rings for 45 seconds so that if only 10 rings were recorded at the first attempt, only 15-10 = 5 rings are required on the second phone call, as long as the phone starts ringing within 45 seconds of the first call.

Q How can I tell if the SUPA8 is OFF?
A When the SUPA8 first answers the phone a single beep will be heard if the SUPA8 is OFF and two beeps will be heard if the SUPA8 is on in either HOME mode or AWAY mode.

Q How safe am I from unauthorised use?
A There are 3 levels of protection. The first level is your User code, which should never be given to anyone. At the second level - when the SUPA8 answers the phone, and if no tone is heard for 30 seconds, the SUPA8 will hang up. Finally, if a tone is heard by the SUPA8 only 4 attempts are allowed to enter a legal code, after which the SUPA8 will hang up. With 2 User codes, thousands of phone calls would have to be made to guess the correct code.

Q What happens if an alarm occurs whilst I am on the phone?
A If the SUPA8 needs to use the telephone because an alarm has occurred, or because an opening or closing report needs to be sent, the SUPA8 will immediately terminate your call and wait for 5 seconds before dialling the monitoring station. If you hear the SUPA8 attempting to dial the monitoring station, you should hang up immediately and try again 5 minutes later if required.
