Maxcalibur

The world's smallest electronic article surveillance (EAS) system

The Sensormatic® Maxcalibur system offers Ultra-Max's exceptional detection rate with a footprint five to six times smaller than that of traditional EAS systems. It's also far thinner than other systems. As a result, there is more space for customers, shopping trolleys, store personnel and merchandise displays and cashiers benefit from an

unobstructed view - a key factor in theft protection. Along with the advantages of its elegant, compact design, the system also excels in defeat resistance and protecting against false alarms when used in conjunction with other Ultra-Max™ Sensormatic® anti-theft products.

ADT. Always There.

designed to fit

The compact design of the Sensormatic® Maxcalibur system offers greater flexibility. Bulky antennas are no longer a concern and there are more mounting options on checkouts, crash posts or walls. For example, the design makes it possible to integrate the antenna into the checkout for maximum space savings.

Maxcalibur's configuration flexibility provide additional benefits with options that include:

- > One tall alarming antenna and one short non-alarming antenna
- > Two short non-alarming antennas with one remote alarm
- > Dual aisle coverage: one tall alarming antenna between two short non-alarming antennas.

unrivalled performance

The Sensormatic® Maxcalibur system offers the same excellent performance as the other products within the acousto-magnetic family. That is why they deliver exceptional defeat resistance and virtually no false alarms. Detection performance is rated at 90 percent for 90cm aisles. Acousto-magnetic technology provides optimal detection of the system's labels and tags through most liquids, metalized packaging foils and shopping trolleys.

a checkout breakthrough

Supermarkets, hypermarkets and other retail stores need shoplifting protection. However, obstructive system solutions at the checkouts often complicate matters. Limited space, passageways, aesthetics and installation limitations are a few of the challenges for EAS systems.

Now it is easy to overcome these challenges with the Sensormatic® Maxcalibur, the world's smallest EAS system. Featuring Ultra•Max™ technology, the system offers excellent shoplifting protection with more open space, especially important for stores with a checkout environment. Its compact size and superb performance are matched by exceptional installation flexibility. Compatibility with all other acousto-magnetic labels and hard tags adds further assurance of Maxcalibur's optimum system performance.

Sensormatic's® breakthrough in acousto-magnetic antenna design provides a solution ideally suited for checkouts.

fast and reliable deactivation

The SlimPad Pro is a ScanMax™ distance deactivator that delivers fast, reliable deactivation at the point-of-sale. With flexible mounting options, SlimPad can be installed on the countertop or even incorporated into the scanner. Its height allows deactivation of both source tagged and retailer tagged merchandise.

all the advantages of Mini Ultra Strip labels

The Sensormatic® Maxcalibur system provides even greater value because of its compatibility with all Mini Ultra•Strip™ labels. These market-proven labels deliver superior coverage in a small footprint with several key advantages:

- > Designed to fit virtually any product
- > Less chance of covering vital product information on package
- > Microwavable versions — applied on top or inserted into meat soaker pads
- > Labels can be disguised within the product packaging
- > Superb detection performance to prevent shielding label with body or other items.
